TOVUTI RASMI YA MWANDISHI

Mwongozo wa

Deployment

Hatua za ku-deploy tovuti ya Sado Faraji kwenye Vercel na kuiconnect na domain **sadofaraji.com**

Author	Sado Faraji
Email	sadofaraji@gmail.com
Domain	sadofaraji.com
Platforms	Amazon + Draft2Digital
Tarehe	Novemba 2026

Utangulizi

Karibu kwenye mwongozo wa deployment wa tovuti ya Sado Faraji. Hati hii itakupa hatua za wazi za ku-deploy tovuti yako mpya (iliyojengwa kwa Next.js 16) kwenye Vercel na kuiconnect na domain yako **sadofaraji.com**.

Tovuti hii imeboreshwa ikilinganishwa na tovuti yako ya awali. Ina vitabu 16 vyote vilivyoorodheshwa kwenye Amazon, makala 2, bio ya mwandishi, na links za moja kwa moja za Amazon Author Store na Draft2Digital (Books2Read).

Vinavyohitajika

- Akaunti ya GitHub (unayo: **shiosamwanza-source**)
- Akaunti ya Vercel (ya bure — tutaiunda hapa)
- Access kwenye domain registrar yako (mahali uliponunua sadofaraji.com)
- Email: **sadofaraji@gmail.com**
- Takriban dakika 30-60 za kazi

Hatua ya 1: Tengeneza GitHub Repository

Kabla ya ku-deploy, unahitaji kuweka code ya tovuti kwenye GitHub. Hii itaweka msingi wa deployment ya moja kwa moja kupitia Vercel.

1.1 Tengeneza Repository Mpya

Nenda kwenye GitHub na tengeneza repository mpya:

1. Fungua https://github.com/new
2. Jaza maelezo vafuatavo:

Repository name: sadofaraji-website
Description: Tovuti rasmi ya Sado Faraji
Visibility: Public (au Private)
Initialize: USITENGENEZE README (tunaingiza code yetu)

3. Bonyeza **Create repository**

1.2 Push Code kutoka Project

Code ya tovuti tayari iko ready kwenye git repository hapa. Ili kuipush kwenye GitHub yako, tumia amri zifuatazo:

```
cd /home/z/my-project

git remote add origin https://github.com/shiosamwanza-source/sadofaraji-website.git

git branch -M main
```

```
git push -u origin main
```

1.3 Tatizo la Authenticator

Kama git inakusuibia kwa sababu ya 2FA/authenticator, hapa ni suluhisho:

Chaguo A: Recovery Codes	Chaguo B: Zima 2FA kwa muda
1. Login kwenye GitHub 2. Settings → Password and authentication 3. Recovery codes → View 4. Tumia moja ya codes (kila code inatumika mara moja) 5. Hifadhi codes zilizobaki salama	1. Settings → Password and authentication 2. Disable 2FA 3. Push code kwenye GitHub 4. Washa 2FA tena (tumia SMS chaguo) 5. Tengeneza token mpya

Kama unatumia SMS: Unaweza kuongeza namba yako ya simu kama chaguo la pili la 2FA. Settings → Password and authentication → Two-factor methods → Add → Text message. Hii itakuruhusu kupata codes kwa SMS badala ya app.

Hatua ya 2: Deploy kwenye Vercel

Vercel ni platform bora zaidi kwa Next.js kwa sababu ina msaada wa asili wa framework, automatic HTTPS, na custom domain support — yote bure.

2.1 Tengeneza Akaunti ya Vercel

1. Nenda https://vercel.com
2. Bonyeza **Sign Up** (juu kulia)
3. Bonyeza **Continue with GitHub**
4. Authorize Vercel kuaccess akaunti yako ya GitHub
(Hii ni salama — Vercel inahitaji hii kwa ajili ya deployment)
5. Jaza maelezo: **sadofaraji@gmail.com**

2.2 Import Project

Baada ya login, Vercel itaonyesha dashboard:

1. Bonyeza **Add New...** → **Project**
2. Tafuta **sadofaraji-website**
3. Bonyeza **Import**

2.3 Configure Build Settings

Vercel itagundua kiotomatiki kuwa hii ni Next.js project:

Setting	Value	Maelezo
Framework Preset	`Next.js`	Auto-detected
Build Command	`next build`	Default
Output Directory	`.next`	Default
Install Command	`bun install`	Au npm install
Root Directory	`./`	Default

2.4 Deploy!

1. Bonyeza **Deploy** (chini kabisa)
2. Subiri dakika 1-2. Vercel itajenga na ku-deploy tovuti yako
3. Utapata URL ya mfano: **https://sadofaraji-website.vercel.app**
4. Bonyeza URL kuona tovuti yako live!

> **Felikilioni!** Tovuti yako sasa iko live kwenye internet. Lakini bado tunahitaji kuiconnect na domain yako ya kibinafsi.

Hatua ya 3: Ongeza Custom Domain

Hii ni hatua ya muhimu zaidi — kuconnect tovuti yako na **sadofaraji.com**. Baada ya hatua hii, wageni wataweza kufikia tovuti yako kwa URL hiyo.

3.1 Ongeza Domain kwenye Vercel

1. Kwenye Vercel dashboard, nenda kwenye project yako
2. Bonyeza **Settings** (tab juu)
3. Kwenye menu ya kushoto, bonyeza **Domains**
4. Weka **sadofaraji.com** → bonyeza **Add**
5. Weka tena **www.sadofaraji.com** → bonyeza **Add**

> Vercel itaonyesha warning kuwa DNS records hazijawekwa bado. Hii ni kawaida — tutazirekebisha kwenye hatua inayofuata.

3.2 Pata DNS Records za Kuongeza

Vercel itakupa DNS records mbili za kuongeza kwenye domain registrar yako. Hizi ndio zile kawaida:

Type	Name/Host	Value/Target	TTL
A Record	@	`76.76.21.21`	Auto
CNAME Record	www	`cname.vercel-dns.com`	Auto

> **Muhimu:** Kama Vercel inakupa A record tofauti (mfano: 64.225.x.x), tumia hiyo. Rekodi zinaweza kutofautiana kidogo kulingana na akaunti yako.

Hatua ya 4: Sasisha DNS kwenye Registrar

Sasa unahitaji kwenda kwenye mahali uliponunua domain yako na kuongeza DNS records ulizopata kutoka Vercel. Registrar maarufu ni pamoja na:

Namecheap	**https://namecheap.com**	**Dashboard → Domain List → Manage DNS**
GoDaddy	https://godaddy.com	My Products → DNS → Manage Zones
Cloudflare	https://cloudflare.com	DNS → Records → Add Record
Google Domains	https://domains.google	DNS → Custom records
Mkuza (TZ)	https://mkuza.co.tz	Account → Domains → DNS Management
Cpanel/Hosting	Toleo lako	Zone Editor → Add A/CNAME Record

4.1 Hatua za Kawaida

1. Login kwenye akaunti yako ya registrar
2. Nenda kwenye DNS Management / Zone Editor
3. **Futa** A records zozote za zamani za sadofaraji.com
(Hii ni muhimu — records za zamani zitaleta mgogoro!)
4. Ongeza **A Record** mpya:
   • Type: A
   • Name/Host: @
   • Value/Target: 76.76.21.21
   • TTL: Auto (au 1 hour)
5. Ongeza **CNAME Record** mpya:
   • Type: CNAME
   • Name/Host: www
   • Value/Target: cname.vercel-dns.com
   • TTL: Auto
6. Hifadhi mabadiliko

Muhimu kuhusu tovuti yako ya zamani: Kwa kuwa unabadilisha DNS, tovuti yako ya zamani (iliyoko sadofaraji.com sasa) itaacha kufanya kazi wakati DNS inapopropagate. Hakikisha umebackup maudhui yoyote muhimu.

© 2026 Sado Faraji

Hatua ya 5: SSL Certificate & Propagation

5.1 DNS Propagation

Baada ya kuongeza DNS records, mabadiliko yataenea (propagate) kote duniani. Muda huu unatofautiana:

Hatua	Muda	Maelezo
DNS Propagation	Dakika 5 - Saa 48	Kawaida ni 1-2 saa, lakini inaweza kuchukua muda
SSL Certificate	Dakika 5-30	Vercel itatengeneza automatically baada ya DNS
CDN Cache	Dakika 1-10	Tovuti itakuwa ready baada ya SSL
Tumia!	Baada ya hapo	Tovuti yako iko live kwenye sadofaraji.com

5.2 Kujaribu DNS Propagation

Unaweza kuangalia kama DNS imepropagate kwa kutumia tools hizi:

```
• https://dnschecker.org — weka sadofaraji.com, chagua A record

• https://whatsmydns.net — ondoa propagation global

• nslookup sadofaraji.com — kwenye terminal
```

5.3 Hakikisha SSL Inafanya Kazi

Vercel itatengeneza SSL certificate automatically. Hakikisha:

- URL inaanza na **https://** (sio http://)
- Browser inaonyesha icon ya kofia (lock)
- Hakuna warning ya "Not Secure"
- Kama SSL haijatengenezwa baada ya saa 1, nenda Vercel → Domains → Bonyeza "Renew Certificate" au wasiliana na Vercel support

---

Felikilioni! Tovuti yako ya Sado Faraji sasa iko live kwenye **https://sadofaraji.com** na **https://www.sadofaraji.com**

© 2026 Sado Faraji

Kiambatisho: Msaada wa Ziada

A. Badala ya Vercel: Netlify

Kama unapendelea Netlify badala ya Vercel, hatua ni almost sawa:

```
1. Nenda https://netlify.com → Sign up na GitHub

2. Add new site → Import existing project

3. Chagua sadofaraji-website repository

4. Build command: npm run build

5. Publish directory: .next

6. Deploy site → Add custom domain
```

B. Vercel CLI (Bila GitHub)

Kama unataka kuepuka GitHub kabisa, unaweza kutumia Vercel CLI:

```
npm install -g vercel

vercel login   # weka sadofaraji@gmail.com

cd /home/z/my-project

vercel   # follow prompts

vercel --prod   # deploy to production

vercel domains add sadofaraji.com

vercel domains add www.sadofaraji.com
```

C. Mafaili Muhimu ya Project

Faili	Kusudi
`src/app/page.tsx`	Ukurasa mkuu wenye sehemu zote
`src/lib/books.ts`	Data ya vitabu 16 na makala
`src/components/book-cover.tsx`	Cover ya kubuni ya kitabu
`src/app/layout.tsx`	Layout na metadata
`src/app/globals.css`	Styling za global
`README.md`	Maelezo ya project
`DEPLOYMENT.md`	Mwongozo huu (kama Markdown)
`next.config.ts`	Next.js configuration
